

Want to take an idea from “hello world” to market launch?

Come work with the team responsible for innovation at the Match Group - the global dating company that owns and operates the biggest dating apps like Tinder, OkCupid, Match, and POF. For 25 years, we've made it our business to use technology to create some of the most popular ways for people flirt, date, and find love. Now, we're looking for someone just as passionate to join us in those endeavors.

Plus1 Labs is our internal innovation and R&D team working on launching cool new products and technologies to create the next big thing for the online dating world. We are looking for Software Engineering Interns to join our Co-op Program for a 6 month tour of duty. The Plus1 team operates with the entrepreneurial spirit of a startup but with the full backing of the Match Group Corporation.

What will I be doing?

You will work with the Plus1 Labs team to take app concepts from ideation to launch. Cut your teeth on an array of new web apps, IOS/Android apps, support software, and the micro service architecture to hold everything together. You will leverage established frameworks and open-source technologies like Python, and Ruby on Rails, React, and Node.js. All the while, experienced team mentors will be there alongside you showing you the ropes. Who knows, you may develop the next Tinder!

What's the team like?

We're a small, ferociously nimble team that iterates fast and ships often. Every team member creatively dialogs with many internal stakeholders to find, define, and build the most impactful products for our existing, new, and yet-to-be-discovered businesses.

What skills will I be using day one?

We work with so many technologies that it's impossible to be an expert in all of them. Here are a few that we'd love for you to have some experience with (you'll learn the others on the job):

- Swift, Objective-C, and the SDK framework
- React, Node.js, Express
- Python, Flask
- Ruby on Rails
- PostgreSQL, SQL Server, Cassandra, Kafka
- Public and/or private APIs (RESTful web services)
- HTML5, CSS, JavaScript in a mobile web universe
- Microsoft stack (C#, ASP.NET, T-SQL, Web API)

What do I need to land this role?

- Experience in working in full-stack development
- Interest in a driven agile environment
- Strong background in object oriented development.
- Ability to creatively solve problems and overcome unique challenges with little supervision or hand-holding
- Currently enrolled at an accredited university pursuing a Bachelor's or Master's degree in Computer Science
- Minimum of a 3.0 GPA or equivalent

Why Match?

- Because we're not just Match. We're Tinder, Plenty Of Fish, OkCupid, and so many more!
- Because opportunities like this don't come along often, and who knows — you could create the next big thing in the world of dating!
- Because our office culture is incomparable — free drinks and snacks all day every day, happy hours, a game room, pool tables. So much room for activities!
